

Church Name
Address
City, State Zip

This report provides the results from comparing your church database with your state's voter registration files.

Note that it is not always possible to match every name to public records. It depends on whether the names in your database are listed identically to the names listed in public records. An exact match is determined by the first and last names, address, state, and zip code provided. We cannot provide comparison on church data that is not an exact match to the state's registered voter data.
